WHIE BURE STRAM ELECTRIC STATION

Annual CCR Fugitive Dust Control Report - Landfills & Material Handling

Reporting Year: 2024

Owner / Operator: Robert E. Mts. Plant Manager 12/3/24
Name Plant Manager 12/3/24
Date

This Annual CCR Fugitive Dust Control Report has been prepared for the White Bluff Steam Electric Station as required by 40 CFR 257.80(c). Section 1 provides a description of the actions taken to control CCR fugitive dust at the facility during the reporting year. Section 2 provides a record of citizen complaints received concerning CCR fugitive dust at the facility during the reporting year and a summary of any corrective measures taken.

ACTIONS TAKEN TO CONTROL CCR FUGITIVE DUST

	N/A	Load conditioned CCR bottom ash into covered dump trucks.	
	N/A	Load CCR economizer ash into covered dump trucks using a telescoping chute.	
	N/A	Load CCR transport tanker trucks from the CCR fly ash silos in a partially enclosed area.	
	N/A	Transfer CCR economizer ash to sitos in a closed conveyor.	Handling of CCR at the facility
	N/A	Hydraulically convey CCR bottom ash to dewalering bins located adjacent to the fly ash silos.	
	N/A	Pneumatically transfer dry CCR fly ash to storage sitos in an enclosed system.	
	N/A	Wet management of mixed CCR material in staging piles at the landfilt.	
	N/A	Water areas of exposed CCR in CCR landfill and staging areas as necessary.	Management of CCR in staging areas and in the facility's CCR units
	N/A	Wet management of CCR bottom ash, fly ash and economizer ash placed in the landfill.

ssions.	Landfill access roads wetted using a watering truck on an as- needed basis. A dust control agent may be added to reduce	Vehicular traffic not associated with ash management activities is minimized.	The speed of vehicles is limited to no more than 25 mph on the landfill access road.	The speed of vehicles within the landfill boundary is limited to no more than 5 mph.	CCR materials transported in open top trucks are either covered by tarp or travel under a spray bar to condition the layer of exposed material to form a thin encapsulated layer.	Waler or chemical dust suppressants are employed during the disposal process in a manner that minimizes fugitive dust formation.	CCR fly ash to be emplaced in on-site landfill is hauled in enclosed tanker trucks.	CCR material is unloaded at the on-site landfill by belly-dumping tanker or end-dump trucks in a manner that slowly releases a controlled amount of material over a short distance to minimize the generation of airborne particulate matter.
